

Mobile Banking & Mobile Payment Security

Securing innovations in banking and payments

In a relatively short time, digital technology has revolutionized the way we live. It's clear that within the payments landscape, technology is also the defining factor in shaping market trends, impacting business strategies and service offerings.

As financial institutions embrace digitization in a highly connected environment, they need to implement resilient measures across all parts of their business. This will be the only way to guarantee regulatory compliance, maintain customer trust and increase market access.

For financial institutions wanting to accelerate their business growth, UL can empower trust in your secure transactions across cards, contactless, mobile and remote payment channels.

Over 22 million customers

are already using mobile banking apps to manage their current accounts in

2017

20%

of Europe's mobile banking applications achieve appropriate level of security

95%

of the banking industry does not reach the security benchmark laid down by the payment schemes

Mobile payments market to reach

\$3,388 BILLION by 2022

Create a compelling advantage through secure mobile banking and payments.
